

DISTILLATE 38[®] HEATING OIL TREATMENT

Reliable Protection Against Sludge and Low Temperatures

- Disperses Sludge & Water
- Cleans Tanks & Lines
- Keeps Burner Parts Clean
- Prevents Frozen Lines

Generations of heating oil technicians have used DISTILLATE 38[®] Heating Oil Treatment regularly to disperse sludge and water, clean tanks and lines, keep strainers and nozzles clean, and prevent frozen lines. Regular use of DISTILLATE 38[®] is recommended for all heating oil tanks, especially outside, underground, and “problem” tanks.

For preventive maintenance, add 32 ounces of DISTILLATE 38[®] with each fill (up to 275 gallons). Best results are obtained if the DISTILLATE 38[®] is put in the tank before filling.

DISTILLATE 38[®] may be used with Ultra Low Sulfur (15ppm) and Biofuel blends up to B20.

32 ounces treats 275 gallons
